

NEWLY EXPANDED, STATE-OF-THE-ART LORMA LABORATORY

December 2011, SAN FERNANDO CITY, LA UNION – The Lorma Laboratory is now the most modern and complete laboratory in northern Luzon. This development was initiated by the Hospital Administrator and EVP, Mr. Robert F. Kaiser, in response to escalating demand for lab services.

A wider waiting area now exists, and patients and watchers can print their lab results nearby. A new, separate extraction area is constructed behind the reception. The clinical chemistry, hematology, drug testing and clinical microscopy areas as well as the serology and histopath areas are also expanded.

The expansion accompanied the acquisition of new machines such as the chemistry analyzer and Architect *ci4100* that enable large volumes of tests to be performed per hour. Such advanced machines provide accurate answers to diagnosis and treatment at affordable rates.

The Lorma Laboratory is now more capable in responding to immediate patient needs as a result of this expansion.
