AxSYM Immunoassay System

Urisys 1800 System

Cell Dyn 3200

Lorma Medical Center's laboratory has some of the most advanced technology in Region I when it comes to clinical diagnosis. The recent acquisition of the AxSYM Immunoassay System from Abbott Labs solidifies its leadership position in immunoassay testing. With the third generation immunoassay system, doctors and patients benefit by having the following:

- Early diagnosis/prognosis on the care of the patient.
- Accessibility to different examinations.
- No additional expenses on travel to Manila.
- Less waiting time for release of results.
- Immediate analysis of Hepatitis B, HIV, Cardiac, Cancer, Thyroid and other advanced conditions.

As further testimony to its commitment to providing the highest quality diagnostic services, the Lorma Lab has also recently purchased the Urisys 1800 (a fully automated urine analyzer with multiple parameters) and the Cell Dyn 3200 (advanced hematology analyzer).

Having top-notch technology is only one aspect of providing quality health care. Our more than 72 years of experience in medical care tells us that it takes doctors, nurses, staff and management working together to be able to continuously give the best health care possible. No matter how much new equipment we acquire, we will never forget to keep treating patients as individuals. It's part of what makes the Lorma Lab the most complete in Region I.

LORMA MEDICAL CENTER

EST. 1934

"Remarkable services, exceptional care!"

Accredited by PhilHealth.
